

Environmental & Toxic Torts

The air we breathe, the water we drink, and the places we live and work are all supposed to be safe and clean. Unfortunately, negligence of others can lead to exposure to dangerous chemicals that can injure or kill.

ENVIRONMENTAL & TOXIC TORT LAWYERS | ROMANUCCI & BLANDIN

Environmental lawsuits that involved injury through the pollution of land, water or air, can be heartbreaking. Certainly, the damage to natural resources is upsetting, but the damage to human life can be tragic. When someone has been exposed to a toxic substance and sustained an injury or illness from it, it is known as a toxic tort case. A company can be held liable if they exposed people to a harmful substance knowingly. If you or a loved one was exposed to a toxic material from which you suffered from an illness or a loved one died, Romanucci & Blandin environmental attorneys and toxic tort attorneys will help you take action against the responsible party.

Environmental law requires expertise of torts and legal issues and processes along with knowledge of environmental regulations, environmental policy and how a government agency operates. Our environmental lawyers and toxic tort lawyers understand these types of complex cases and how to bring justice to people who have suffered from this type of exposure and injury.

Environmental cases of land use

There are a variety of ways people and property can be exposed to toxic substances. One common way is through pollution of real estate or land. The way companies or other organizations deal with waste management can impact people far beyond their own staff. The unsuspecting public may be at risk. Brownfields that be contaminated often remain vacant in communities and can be a source of environmental pollution. The improper remediation of hazardous waste allows toxic substances to seep into the soil, leaving people at risk for injury, illness or wrongful death from the exposure.

Environmental cases of water pollution

Chemicals in the groundwater and substances or objects dumped in oceans, lakes and rivers are all examples of how natural resources are abused, but how the environment can become a place of exposure for people. The Clean Water Act is the primary federal law in the United States to restore and maintain the integrity of waterways, and the Environmental Protection Agency

(EPA) has regulatory powers to manage natural resources, but still in many places water pollution persists with a wide variety of chemicals putting people at risk.

Environmental cases of air pollution

The right to breathe is considered a civil right, and but air quality is an important factor. Clean air is critical to human health, and emissions from vehicles, companies, even livestock can cause illness and injury. Additionally, environmental data and reports show a correlation between emissions and climate change, which itself can causes additional health and safety risks for people.

Toxic Tort Litigation

Many chemicals are incredibly toxic to our health and are far too common in our communities. Numerous chemicals have caused illness or death, including:

- **Asbestos** – Asbestos is used in fire-resistant and insulating materials such as brake linings and hair dryers. Exposure to asbestos can cause lung cancer, mesothelioma and other illnesses.
- **Lead paint** –Lead paint was commonly used in homes, industrial facilities and apartment buildings that are older. There are numerous medical problems that result from lead poisoning, including kidney damage and brain injuries, especially in children.
- **Pesticides**- Pesticides are used to prevent, destroy, repel or mitigate any pest. Pesticides have been linked to numerous human health problems, including nervous system or endocrine system damage or cancer.
- **Benzene** – An organic chemical compound used to manufacture metal, wood and textile and exposure can cause aplastic anemia, leukemia, excessive bleeding and other illnesses.

In some cases, a group of people, such as employees are exposed to a toxic substance together, can result in a class action lawsuit. We have experienced toxic tort attorneys who have handled a variety of toxic tort cases, including class action lawsuits for their clients.

Some examples of our environmental cases and toxic tort cases:

Our firm is lead counsel on a mass tort in Willowbrook, Illinois, where the company Sterigenics International was found to be releasing harmful levels of a toxic gas that may increase the public health's risk of disease, according to the U.S. Department of Health and Human Services Agency for Toxic Substances and Disease Registry. We represent members of that community who have been sickened with certain cancers from the long-term toxic air pollution, and families of some residents who have died.

We are also lead counsel on a hazardous materials exposure in the far north suburbs of Chicago that caused injury for many people in the area who required hospitalization and medical treatment. This accident changed the lives of many residents and visitors in a single day, and we are committed to justice for their injuries.

The problem with environmental exposure is nationwide, with Pennsylvania, North Carolina, New York, Washington D.C., Michigan and others states with cases stemming from environmental exposure, injuries to residents and damages to real estate.

Environmental attorneys and toxic tort attorneys

The environmental and toxic tort attorneys at Romanucci & Blandin know the damage in these situations can also include missed work and loss of income, medical bills for treatment and more. The attorneys at Romanucci & Blandin know how to navigate these complex cases and bringing justice to victims, and sometimes settle these cases without going to trial.

With headquarters in Chicago, Romanucci & Blandin approaches an environmental action or toxic tort action as a way to provide monetary compensation and hold a culpable a person or institution financially accountable and responsible for the economic, physical and emotional damages that have occurred.

Our law firm has a team of attorneys and staff who have years of experience with environmental litigation. Our team includes partners who guide the process and share their deep knowledge of these types of lawsuits. Each client and each situation is different, and your claim is treated with great care and respect as the team investigates what happened and determines the best path to justice for you.

At Romanucci & Blandin, our environmental attorneys and toxic tort attorneys research the most up-to-date regulatory changes and environmental laws and hire trained and experienced environmental experts to work as expert witnesses and consultants on your cases. We will evaluate your injury, claim and research the relevant statute of limitations applicable to your case. Whether it is to review medical bills, resources laws, or knowing state agencies and governmental agencies and how they operate, we work to locate and utilize the best expert witnesses across the country who are experienced in all the relevant state laws.

Members of our team believe strongly in advocacy for the environment and public health and many have been involved in seeking justice since they were earning their bachelor's degrees, or were in law school earning their juris doctorate and passing the bar exam. Advocacy for these environmental cases is important to bar associations and other professional groups where we engage with other law firms for the greater good. Sustainability, clean energy, renewable energy, and biodiversity are all important to the public interest, and to us, to keep people and communities safe.
