SHOULDER DYSTOCIA LEGAL REPRESENTATION: FIGHTING FOR JUSTICE

Shoulder dystocia is a birth injury that happens when one or both of a baby's shoulders get stuck inside the mother's birth canal during labor or birth. In most cases of shoulder dystocia, babies are born safely. However, this can cause severe problems for both newborns and mothers.

Types of injuries due to shoulder dystocia

Some of the injuries that newborns can sustain from shoulder dystocia such as:

- Birth hypoxia
- Brachial plexus injuries
- Fractures to the baby's clavicle or humerus
- Infant death

There are many instances where shoulder dystocia can be prevented if medical professionals notice the warning signs. If shoulder dystocia occurs, the medical staff needs to dislodge the baby's shoulder safely and safely. There are some risk factors that can cause shoulder dystocia, and the physician should be aware of them.
